

2nd TeRRIFICA Reflective Workshop Reflecting on Key Performance Indicators (KPIs) at the Science meets Parliaments in Belgrade

- The 2nd TeRRIFICA Reflective Workshop will be held on July 10th and 11th in Belgrade. It will be a joint activity with “Science Meets Parliaments” event hosted at the National Assembly of the Republic of Serbia. The TeRRIFICA team will meet the day after to the workshop to celebrate an internal Consortium meeting.
- This second workshop will focus on Key Performance Indicators (KPIs) and its meaning for climate action. The six TeRRIFICA pilot regions in Belarus, France, Germany, Poland, Serbia and Spain, will be presented at the event on merging pilot regions topic-wise: air, agriculture, water and temperature.
- The workshop is organized by the Center for the Promotion of Science within the framework of the H2020 TeRRIFICA project, whereby eight European institutions work together to foster competence for climate change adaptation and mitigation in different European regions with a specific focus on Responsible Research and Innovation.

2nd July 2019

After a successful [1st TeRRIFICA Reflective Workshop](#), TeRRIFICA will hold the **2nd TeRRIFICA Reflective Workshop** at the **National Assembly of the Republic of Serbia on July 10th and 11th**. This workshop is part of the [‘Science Meets](#)

[Parliaments’](#), event organized for the first time in Serbia by the Center for the Promotion of Science in collaboration with the Ministry of Education, Science and Technological Development, and under the patronage of the Joint Research Centre (JRC) of the European Committee.

This second workshop will focus on **Key Performance Indicators (KPIs)** and its meaning for climate action. In this workshop, we will prove for stakeholder perspectives on what ‘sucess’ looks like for this kind of initiative in as much details as possible. The workshop will be facilitated in a manner similar to the first reflective workshop, as a series of concurrent focus groups with partner representatives as moderators. The discussions will be used as data pool for the identification of potential indicators that

are not already accounted for in the MoRRI indicators or other existing metrics considered for use in the project. This discussion will be analysed systematically to identify additional variables and KPIs that could be defined based on this bottom-up perspective from stakeholders. The workshop will be used to expand the KPI scope beyond the MoRRI indicators.

More information and full programme available here: <https://eu.cpn.rs/en/science-meets-parliaments>

The [TeRRIFICA team](#) will meet the day after to the workshop to celebrate an internal Consortium meeting. Representatives from the consortium institutions, together with members of the TeRRIFICA Advisory Boards, will gather in the premises of the Center for the Promotion of Science in Belgrade.

What is MoRRI?

MoRRI is EC-funded project that developed a monitoring system to show the evolution and benefits of RRI across EU member states. MoRRI

focused on the EC conception of RRI (namely an operational package consisting of six dimensions: gender equality, science literacy and science education, open access, public engagement, ethics and governance). In and across these dimensions MoRRI identified a number of monitoring indicators. This was achieved through workshops, multiple surveys, and a series of case studies alongside desk-based research and other methods. The MoRRI project's outputs are a significant source of evidence on the benefits of all aspects of RRI for society, the economy and science itself.

What is TeRRIFICA?

The EU funded project TeRRIFICA (Territorial Responsible Research and Innovation Fostering Innovative Climate Action) with its network partners in six regions of Europe will seek for best practice and identify the approaches that are already in place to mitigate climate change and adapt to its effects.

In a trans-disciplinary partnership, TeRRIFICA involves six European countries, bringing together three research institutions, three non-profit organisations, one public association of universities and one public institution for science promotion. TeRRIFICA is led by WILA Bonn (Bonn, Germany) and the TeRRIFICA consortium is composed by the Rhine-Waal University (Kleve, Germany), the Education for Sustainable Development Association (Minsk, Belarus), the Center for the Promotion of Science (Belgrade, Serbia), the University of Vechta (Germany), the Adam Mickiewicz University (Poznan, Poland), Sciences Citoyennes (Paris, France) and the Catalan Association of Public Universities (Barcelona, Spain). The project is funded by the Horizon2020 programme of the European Commission.
